

ANSIBLE CONSULTING SERVICES

# THE GREAT MIGRATION

## GET IN TOUCH

**info@ansible.com**  
**+1 919.667.9958**  
**ansible.com**

Our team members are carefully selected and battle-tested individuals with a history of systems administration, development, consulting, and automation. They have experience working in shops of all sizes in both the public and private sector. All of the team members are advanced Ansible users, have contributed code to the open source product, and are active members of the community.

## WHY GET MIGRATION CONSULTING FROM ANSIBLE?

Looking for the ease of Ansible but currently using Puppet, Chef, CFEngine, or some custom in-house solution? The Great Migration services package steps through your current configuration management and deployment solutions and creates Ansible equivalents. The engagement includes:

**Assessment:** Working with the your legacy tool expert, we will analyze your current tool's content and create a migration plan.

**Implementation:** Building on the recommendations made in the Assessment section, we will create functionally equivalent Ansible content.

## WHAT DOES THIS CONSULTING PACKAGE COVER?

There are a lot of automation tools in the market. If you've come to the decision that your current solution is too complex, lacks necessary features, or is difficult to maintain, then Ansible Consulting is ready to help. Ansible's migration service is a program designed to help your company obtain or surpass feature parity with your previous automation solution, while maintaining Ansible's core tenant of simplicity and maintainability.

Whether it's dozens of Chef recipes, Puppet modules, CFEngine classes, or shell scripts, our Solutions Architects will work together with you to identify the desired end state, and reproduce it with simple Ansible playbooks.

Tasks typically include:

- Reviewing existing content and marking problem areas
- In a modular fashion, replicating the end-states created by existing tools
- Discussing needs that are not met with existing tools and how Ansible can help
- Reviewing the benefits of Ansible Tower for your environment

Depending on the client needs, at the end of the engagement the Ansible Consulting team will deliver a partial or complete migration of the current tooling to Ansible.

With a partial migration, the Ansible team will provide a document proposing an approach to finish the migration, and seek to "train the trainer" to enable your team for future migration opportunities.
